

What is claimed is:

1. A disposable protective glove comprising:
a first layer, with an effective amount of antimicrobial agent therein or
5 thereon; and
a second layer, to be closer to a hand than the first layer, when the
glove is worn on the hand, the second layer configured to resist, when the
glove is worn, penetration by the anti-microbial agent and thereby to resist
contact between the anti-microbial agent with the hand.
10
2. A glove according to claim 1, wherein the anti-microbial agent
is selected from the group consisting of halogenated hydroxy diphenyl
derivatives such as diphenyl ethers, phenol derivatives, diacetyl-amino-
azotoluene and trichlorocarbon, 2,4,4'-trichloro-2'-hydroxydiphenyl ether,
15 chlorophene, and dichloroxylenol, hexachlorophane.
3. A glove according to claim 2, wherein the antimicrobial agent
comprises 2,4,4'-trichloro-2'-hydroxydiphenyl ether.
- 20 4. A glove according to claim 3, wherein the glove contains from
0.1 to 10 % by weight of 2,4,4'-trichloro-2'-hydroxydiphenyl ether.
5. A glove according to claim 4, wherein the glove contains from
0.1 to 5 % by weight of 2,4,4'-trichloro-2'-hydroxydiphenyl ether.
25
6. A glove according to claim 5, wherein the glove contains from
about 0.3 to 3% by weight of 2,4,4'-trichloro-2'-hydroxydiphenyl ether.

7. A glove according to claim 1, wherein:
the second layer includes an interior surface;
the glove further comprises a preparation disposed on the interior
5 surface;
the preparation includes an additional anti-microbial substance; and
the preparation includes a buffer that helps resist change in pH during
wearing of the disposable protective glove.
- 10 8. A glove according to claim 7, wherein the additional
antimicrobial substance is acidic during a period when the protective glove
is worn, and wherein acidity of the additional antimicrobial substance
contributes substantially to anti-microbial properties of the antimicrobial
substance.
- 15 9. A glove according to claim 8, wherein the preparation has pH
within a range of 4.5 to 6.0 during a period in which the preparation is moist.
- 20 10. A glove according to claim 7, wherein the additional
antimicrobial substance includes an acid that exists naturally in an edible
plant.
- 25 11. A glove according to claim 7, wherein the preparation further
includes a skin soothing substance.
12. A glove according to claim 11, wherein the skin soothing
substance includes dehydrated aloe vera.

13. A glove according to claim 1, wherein the first layer is made from a material selected from the group consisting of a resinous material and a polymer material.

5

14. A glove according to claim 1, wherein the first layer is made of a single layer selected from the group consisting of natural rubber latex, acrylonitrile, vinyl, chloroprene, and polyvinyl chloride.

10 15. A glove according to claim 1, wherein the second layer is made of a single layer of fluid-impermeable material.

16. A glove according to claim 1, wherein the antimicrobial agent is evenly distributed within the first layer of the protective glove.

15

17. A glove according to claim 1, wherein the antimicrobial agent is evenly dispersed on the outer surface of the first layer.

18. A disposable protective article comprising:
20 an outer layer having an antimicrobial agent distributed within or applied onto the outer layer; and
an inner layer to be closer to the skin than the outer layer, the inner layer having less proteins than natural rubber latex and comprising an interior surface with a skin conditioning or soothing substance dispersed
25 thereon;

wherein the inner layer serves as a barrier between the skin and the outer layer so to resist developing of antimicrobial resistance in microbes on

the skin and some of the skin conditioning or soothing substance will interact physically with perspiration from the skin and due thereto increase in ability to condition or soothe the skin.

5 19. A disposable protective article according to claim 18, wherein the antimicrobial agent is distributed within the outer layer and applied onto the outer layer.

 20. A disposable protective article according to claim 18, wherein
10 the skin conditioning or soothing substance is a dehydrated preparation.

 21. A disposable protective article according to claim 18, wherein the skin conditioning or soothing substance also contains an additional antimicrobial agent.

15

 22. A disposable protective article according to claim 18, wherein the inner layer comprises polyurethane, chloroprene or polymer.

 23. A disposable protective article according to claim 18, wherein
20 the disposable protective article comprises a disposable protective examination glove.

 24. A method for making a disposable protective article for protecting skin, the disposable protective article to comprise multiple layers,
25 the method comprising:

 forming a first layer, the first layer comprising a material that includes an antimicrobial agent dispersed within;

forming a second layer, the second layer to be closer to the skin than the first layer when the disposable protective article is in use, wherein the second layer is to help resist contact between skin and the antimicrobial agent when the disposable protective article is used on skin.

5

25. A method according to claim 24, wherein the step of forming the first layer precedes the step of forming the second layer.

26. A method according to claim 24, wherein the antimicrobial agent is hereinafter referred to as zeroth antimicrobial agent, the method further comprising:

10

applying a first preparation to a surface of the first layer, the first preparation including a first antimicrobial agent.

15

27. A method according to claim 26, the method further comprising:

applying a second preparation to a surface of the second layer, the second preparation including a skin conditioning substance that is activated by perspiration from the hand.

20

28. A method according to claim 26, the method further comprising:

25

applying a second preparation to a surface of the second layer, the second preparation including a second antimicrobial agent, the second antimicrobial agent being different in kind from the zeroth antimicrobial agent.

29. A method according to claim 24, wherein the antimicrobial agent is hereinafter referred to as zeroth antimicrobial agent, the method further comprising:

5 applying a preparation to a surface of the second layer, the preparation including:

 an antimicrobial agent different in kind from the zeroth antimicrobial agent, a skin conditioning substance, or a skin conditioning substance.

10 30. A method according to claim 24 wherein the disposable protective article comprises a disposable protective glove.

 31. A method according to claim 24 wherein the step of forming a first layer comprises coating a former with a composition that includes latex,
15 nitrile, or PVC.
